

## Commerce Front Glazed Stackable

Ezial's Front Glazed Stackable support structure is virtually invisible. This provides a flat and lustrous glass façade finish, enhancing the visual appeal of your project. Highly functional in nature, this unique system is capable of delivering higher and wider glass openings for augmented views across multiple floors. Large commercial buildings often expand, sway, and contract. The Ezial Front Glazed Stackable System incorporates features to combat these factors. In-built durability and flexibility deliver exceptional water diversion and thermal efficiency. Our Stackable Front Glazed Systems are significantly more cost-effective than suspended system alternatives, providing a contemporary yet economical solution for your next commercial project.

### FEATURES & BENEFITS

- Repeated modular unitised system
- Near-invisible support structure
- Higher and wider glass openings across multiple floors
- Designed to cater for structural movement, expansion and contraction
- Lower material costs when compared to a suspended system
- Wide range of expansion and contraction movement between floors
- Self-draining sill and transom designs for enhanced water management
- High performance seals for optimum insulation, acoustics and weather durability

## PRODUCT OPTIONS

- Sub-framing for exposed areas
- Mullion splicing for enhanced strength and durability
- Internal, external or structurally bonded glazing
- Adaptability – can combine with various systems across the Ezial product range

## SPECIFICATIONS

### FRAME SIZE

150mm

### MAXIMUM FRAME SIZE

3500mm high x 1500mm wide (single)

### MAXIMUM NO. OF FRAMES

Unlimited

### GLAZING RANGE

5mm - 13.5mm (single)

13mm - 30mm (double)
